Objects

One of the strategic plans of the General Directorate of Water and Sewerage as the first step is supplying and installing water meters all over Kurdistan region to cover all the water consumers and the second step is implementing the project of "systemizing collection of water fee", to obtain the current and future needs to support economic and social development and providing water services at the highest standard levels. Considering increasing in the population growth and supplying of potable water which leads to fill the gaps in the water coverage services and institution, we need the project of "systemizing collection of water fee".
